CS411
User Stories
Jared Yellen, Serra Jung, Sarah Oh, Sooyoun Lee

1. Tom creates his new account to have access to the web application. He tries to log in and fails as he does not have an account. He chooses to make an account by logging into this application by his instagram user account. He successfully lands to his profile page where a list of subreddit matches will be listed. As he links his instagram account with the application, it will show what subreddit fits his interest the most and he will be able to see recommended subreddit pages from his profile page.

2. Harry accesses our website, and logs in based off of the user story of Tom. Harry then proceeds to click a button on the main webpage called "Find Subreddits!", which brings up a popup in the middle of the screen. The popup has an option to use the linked Instagram, or to search for and use a different Instagram. Harry selects the linked Instagram option, and an error message pops up saying "Empty Instagram", due to his Instagram having 0 posts. Harry updates his Instagram with a photo and captions, and returns to our webpage and tries again. This time the website gets redirected to a site that loads a variety of different subreddits.

3. Jerry first logs in to his registered account on the application through his instagram account and he successfully lands on his profile page where a list of subreddit matches are listed from having previously generated them. He scrolls through the list and doesn't find any of them interesting, so he deletes the recommendations one by one. For every deleted recommendation, a new recommendation takes its place.
